I recently had the opportunity to try out the Club Car Connect system during a golf tournament. It was my first time using this technology, and I was curious to see how it would enhance my golfing experience. Club Car Connect is a GPS-based system that is integrated into the golf carts. It provides real-time information and interactive features to golfers during their round. Here's how it works:

- User-friendly Interface:** The system features a touch screen display mounted on the golf cart's dashboard. The interface is intuitive and easy to navigate, even for someone like me who isn't particularly tech-savvy. The screen is bright and clear, making it easy to read even in bright sunlight.
- Course Mapping:** Club Car Connect has detailed mapping of the golf courses it supports. Before starting your round, you can select the course you're playing from a list on the screen. The system then displays an aerial view of the hole you're on, showing distances to hazards, bunkers, and the green.
- Distance Measurement:** One of the most useful features of Club Car Connect is its ability to provide accurate distance measurements. As you drive along the course, the system constantly updates the distance to the front, middle, and back of the green. This information is invaluable for club selection and shot planning.
- Shot Tracking:** Club Car Connect also allows you to track your shots during the round. When you reach your ball, you can mark its location on the screen, which then calculates the distance you hit the shot. This feature helps you analyze your game and identify areas for improvement.
- Live Leaderboards:** Another great aspect of Club Car Connect is its live leaderboard feature. If you're playing in a tournament or with friends, you can see how you're performing compared to others on the course. It adds a competitive element to the round and keeps you engaged throughout.
- Messaging and Notifications:** The system also enables communication between golfers and the clubhouse. You can send messages to the staff, request food or beverages, or even report a maintenance issue with the golf cart. Notifications can also be sent to the screen, informing you about upcoming events or promotions at the club. My experience with Club Car Connect was extremely positive. It added a new level of convenience and information to my round of golf. The accurate distance measurements, shot tracking, and live leaderboards were particularly useful in improving my game and keeping me engaged. I highly recommend giving Club Car Connect a try if you have the opportunity. The Ultimate Summer Ride When you're behind the wheel of our new Onward High Performance vehicle, you'll experience the power, torque, and acceleration only possible by AC-drive technology. And with our new Club Car Connect display, your neighborhood and course experiences are enhanced with accessible vehicle information and course navigation. This rugged,... Club Car has the most sophisticated and comfortable ride for your lifestyle. Automotive style, multiple color options, and a top speed of up to 19mph mean our gas golf carts or electric models with standard or lithium batteries take you where you want to go with flair. Whether taking the kids to the pool, running an errand, or traversing rough terrain, our line of personal transportation, utility, and street-legal vehicles and golf carts deliver in looks and performance. Club Car is a company that makes electric and gas-powered golf carts for personal and commercial use. The company is a leader in the industry, known for being one of the first companies to produce street-legal golf carts.Club Car's Early Years The idea of the golf cart has been changing since its inception. Club Car has been at the forefront of the evolution of golf carts from its beginning. Did you know that the Club Car was the first to invent a golf cart with the steering wheel? This happened in the 1960s. The interesting fact is Club Car was not always Club Car. Earlier, it was known as Landreth Machine, a Dallas, Texas based company. Later, Bill Stevens of Augusta bought it and moved from Texas to Georgia, where over the years, it would become one of the most popular golf cart brands in the industry. Today it continues to innovate by making necessary changes and technological developments like charging ports or other technology you'd expect in carts today.The golf cart industry grew even more in the 1970s, and carts started to be used for transportation off the course. It was seen as an alternative to public transportation or driving your car everywhere, especially in small communities with few roads.Club Car Golf Cart ModelsThe First of Club Car - 1960Club Car's first product was a battery-powered three-wheeled vehicle called the "cart carrier." It was designed to transport carts from one part of a course to another, but it wasn't long before customers began asking for them to carry people too. So the company made some tweaks and came up with "Club Car."The First Four Wheel Cart - 1975The most jaw-dropping changes happened in 1975 when the company introduced the four-wheeled cart. The early Club Car models had bucket seats, but a bench bottom with individual backs was later used. The Club Car DS Model - 1981In 1982, Dom Saportito joined the design group and developed a new DS cart. It was more stylish than previous models, with his initials featured in its name: DS. This model included their first 48-volt electric motor, which added about 30% increased power to drive the train compared to older versions of this product line. The design is the same that is seen today except for minor changes. The Carryall II was also introduced in 1985, one of the first utility vehicles for commercial use.Club Car Precedent Model - 2004In 2004, Club Car launched the Precedent i2. This golf cart model has a fleet based on five years of research and development that quickly sets the standard for style and comfort. It is also their first 4WD utility vehicle introduced in this year called Carryall 295 which contains an electric motor to provide power needed when traversing rugged terrain or more demanding applications such as landscaping businesses, parks & recreation areas, etc.Club Car Onward Model - 2017In 2017, the company launched its first Onward series of personal vehicles. This model can customize a vehicle's accessories, color, and more. The company launched 2-passenger, 4-passenger, and 4-passenger lifted vehicles in the initial launch.Club Car Golf Cart DesignThe Club Car is a cart that doesn't change much over time. The design has been pretty steady for about forty years, going through some changes in materials and the introduction of gas engine powertrain. Big auto companies upgrade cars almost on an annual basis, but this isn't the case with reliable, utilitarian Club Car, where sticking to good things is the modus operandi and where design over years has been consistent as a wheelbarrow. One time you can bet on a design change is when the company was sold in 1973. This gave rise to several changes in golf cart design. In 1993 that Club Car changed their body design when minor alterations were made to the front cowl & headlights, changing from metal into an indestructible thermoplastic resin called "ArmorFlex."Club Car's System Club Car started off with only making a 36 volt electric cart, but in 1984 they branched out and made the first gas-powered 4-cycle golf cart. The 90's decade is dedicated to developments. The very first overhead valve engine was produced in 1992. Club Car also worked on creating in-demand vehicles specific to customer needs.The Excel Boost System was created in 2008 to boost car efficiency and give consumers a better driving experience. It works by allowing for more control over the vehicle's speed and faster acceleration than other cars of its kind that were on the market at this time. The Villager 2+2 LSV was also introduced around this time (2008), allowing drivers to move through neighborhoods, downtown areas, or anywhere else with ease while operating within legal limits.In 2010, Club Car released the new connected technology system. One of its features was a 3D course flyover experience with Visage and fleet management software. The zero-emissions LSV (low-speed vehicle) was introduced on Earth Day, and other features were highlighted by Club Car.Club Car's Experience and EvolutionClub Car has been building high-quality vehicles for nearly 60 years. Their first products were golf carts, but today they're also known as a leading utility and personal vehicles provider. They strive to be the best at what they do because that's always their goal - excellence is Club Car's top priority!What year is my Club Car Golf Cart?Popular Club Car PartsFurther Read Should You Buy Used Golf Cart Parts?10 Best Golf Carts to Buy in 20227 Modifications That Will Void Your Golf Cart Warranty Product availability may vary by location.
