The Android VPN API supports only TUN-style or routed tunnels on Layer 3 at the moment. TAP-style or bridged tunnels on Layer 2 are not possible on Android. This is a limitation of the Android platform. If you try to connect a profile that uses a TAP-based tunnel, you will get an error that says only Layer 3 tunnels are currently supported. If you really want to use TAP-style tunnels supported in OpenVPN Connect, we would encourage you to contact the Google Android team and ask that the VpnService API be extended to allow this. Without such changes to the VpnService API, it is not possible for non-root apps such as OpenVPN Connect to support TAP-style tunnels. Currently we have a very little demand for this feature because Layer 3 is for a number of reasons the better choice anyways. The Android VPN API supports only TUN-style or routed tunnels on Layer 3 at the moment. TAP-style or bridged tunnels on Layer 2 are not possible on Android. Transportation during the 2024 Summer Olympics and Paralympics constituted a major challenge for the organisers due to the scale of the event. Over €500 million was invested in improvements to transportation infrastructure for the games. A mobile app was developed to facilitate travel by offering a route calculator, and 5,000 agents were deployed at stations and bus stops to assist travellers. A goal of Paris 2024 was to halve the average carbon footprint of the London 2012 and Rio 2016 games. The organisers estimated that more than a third of the greenhouse gas emissions would be from the transport of athletes and spectators. All venues were made accessible by public transport and bicycle, with 415 kilometres (258 mi) of cycle paths created to link the venues and 27,000 bicycle racks installed. Public transport was extended and services increased. The goal was met, with an estimated 54.6% reduction, representing 1.59 million tonnes of CO2 equivalent. (Full article...) Found from the intertidal zone to a depth of 30 m (100 ft), this species is common throughout the tropical Indian and western Pacific Oceans in nearshore, coral reef-associated habitats. It is a fairly small ray, not exceeding 35 cm (14 in) in width, with a mostly smooth, oval pectoral fin disc, large protruding eyes, and a relatively short and thick tail with a deep fin fold underneath. It can be easily identified by its striking color pattern of many electric blue spots on a yellowish background, with a pair of blue stripes on the tail. This bluespotted ribbontail ray was photographed in the Red Sea off the coast of Egypt.
